

Ground Saver

Soil Remediation At Its Best!

In the world of Industry, accidents occur. Those that threaten the environment are the hardest to handle. With an oil spill or biohazard on the ground, it can take months, as well as hundreds of thousands of dollars to remediate the area. And after all the cleaning efforts occur, the soil left over is basically dead and void of the natural fertility it once had.

Ground Saver is the best biological soil remediation answer on the market. Ground Saver contains a concentrated complex of humic acids, cultured soil bacterias, and trace minerals – a combination that works especially well in digesting biohazards while also restoring soils to their most fertile state.

- ✓ Breaks-down & Digest Biohazards
- ✓ Helps Decontaminate Oil & Waste
- ✓ Restores Damaged Soils
- ✓ Saves Time & Money
- ✓ Re-Establish Healthy Soil Bacteria
- ✓ Effective & Economical
- ✓ Non-Toxic, Non-Polluting
- ✓ Biological & Biodegradable
- ✓ Completely Affordable
- ✓ Heals the Environment

Ground Saver revives tired, damaged, and contaminated soils. It consumes biohazards, digested oil masses, and greases. It also helps put oxygen back in the earth, takes out hardpan, and opens the soil for accepting and storing valuable moisture. It has 64 strains of microbes which stimulate an organic decay system, using natural moisture to re-establish good soil life, convert carbon from vegetation residue (which feeds new plant life), and improve good biological activity.

Manage the mess and heal the land with Ground Saver!
